

MVC (4.0) (Model View Architecture) Training Syllabus

Model- View-Controller (MVC) is an architecture that separates the representation of information from the user's interaction with it. The Modal consists of application data and business rules, and the controller mediates input, converting it to commands for the modal or view. A view can be any output representation of data, such as a chart or a diagram. Multi-views of the same data are possible, such as a pie chart for management and a tabular view for accountants. The central idea behind MVC is code reusability for management and a tabular view for accountants. The central Idea behind MVC is code reusability and separation of concerns

TRAINING DURATION 35 Hrs / 3 Weeks / Customized
